DairyBits Adds Janitorial Equipment to Inventory

September 5, 2012

Leicestershire, UK (RPRN) 09/05/12 — DairyBits, which provides easy access to a wide range of cost-effective dairy machine parts, has extending its inventory with the addition of a range of janitorial equipment for specific use in highly sanitised conditions.

In a dairy processing environment, maintaining the highest standard of sanitation is of the utmost importance to avoid the potentially catastrophic event of product contamination. As a result, DairyBits now stocks a wide range of janitorial items which incorporate the latest in cleaning technology to inhibit the growth of bacteria and aid the cleansing process.

Mark Gudgeon, managing director of DairyBits, commented: “Many people think that a brush is just a brush, a squeegee just a squeegee and a mop just a mop. However, in tandem with more complicated parts such as rotating seals and motors, technological advancements have meant that these everyday objects have been lifted to a height that is not only suitable for maintaining hygienic conditions, but capable of setting new levels of sanitation.”

Indee.d, many of the janitorial products boast the very latest in microbial technology which has been successfully proven to inhibit the growth of a broad range of moulds, mildews and bacteria.

Mark continued: “In a food processing environment you can’t take risks where cleanliness is concerned. If a batch gets contaminated, people can become ill if they consume the product. Should that happen, health inspectors would be well within their rights to cease production until the problem is resolved and, processes set in place to ensure that it doesn’t happen again. The time that this takes could potentially cripple a business – it’s simply not worth the risk – and that’s not even taking into consideration the damage that would be caused to the brands’ reputation.”

From brushes and brooms to dustpans and squeegees, DairyBits can provide the latest janitorial equipment at the best prices, fast. What’s more, DairyBits.co.uk allows manufacturers to search and buy 1,000’s of OEM and replica parts, many of which it continually has in stock. Parts such as stainless steel fittings and further hygienic fittings can all be located in various categories and sub-categories including electrical, mechanical and liquid and also the specific part required.
