Energy Saving Products that Will Revolutionise your Office Space

October 2, 2013

London,UK (rushPRnews) 10/02/13 — The UK's economic recovery has been hit hard this week, as a number of factors have conspired to undermine the nation's growth. To begin with, falling levels of business investment have caused stagnation in numerous industries, while just one in ten small and independent ventures are expecting to expand their operation in the next 12 months. Alongside dwindling consumer spending, this suggests that small business owners are going to need to slash their operational costs if they are to earn a profit in the current financial year.

3 Energy Saving Products that Will Revolutionise your Workplace

With this in mind, it is worth addressing the energy market and the cost-effective products that can help you save money on a daily basis. Consider the following options: -

The Energy Saving Power Meter: In the quest to reduce your businesses

carbon footprint and energy consumption, you may have considered a series of complex and potentially costly solutions. The energy saving power meter offers a breathtakingly simple and affordable alternative, however, as it can be simply connected to a mains socket before you plug in your appliance. The meter then measures your exact levels of energy usage and consumption, while also helps you to calculate the precise cost of operating particular appliances on a daily basis.

ñ **The Power Management System:** A slightly more expensive but far more far reaching solution is the Power Management System, which is innovative in its design and enables users to program their appliances to function at selected times. If you want your electric fan to come at predetermined times during the day, for example, you can use the power management system to regulate this and your daily energy consumption. Designed as an extension plug, it enables users to connect 4 individual appliances at a time and save considerable sums of money over a period of concerted use.

ñ **The Electronic Thermostatic Radiator Valve:** On a similar note, the Electronic Thermostatic Radiator Valve allows to perform a similar task in terms of heating appliances. In short, it is a remote controlled tool that enables you to program your radiator, so that it only functions during predetermined times of the day. Not only this, but the device also works by regulating temperatures and ensuring that you can meet your obligations as an employer without consuming an excess of energy. By using the Electronic Thermostatic Radiator Valve, it is estimated that you can make energy savings of up to 25%.

The Bottom Line

As a small business owner, these relatively simple and cost-effective products may hold the key to consolidating your venture during difficult economic times. To find out more about the potential energy savings that you can make by using these goods, visit Energenie4u.co.uk today.
